# FREDERIQUE CONSTANT PHILOSOPHY & BRAND VALUES

Born in 1988 from the passion that Aletta and Peter Stas share for refined watches, Frederique Constant does not only offer Swiss luxury timepieces, but also makes them accessible to watch lovers and connoisseurs alike.

Since the early 18<sup>th</sup> Century, Geneva has been known as a major center for the creation and production of fine timepieces. Over the past 300 years, the city's watchmakers have risen to unparalleled heights in the Art of Horology. Frederique Constant's watchmakers are the Maison's most important assets, as each of its watches is individually assembled by hand.

Most of the world's famous watch manufacturers are based in Geneva. The concentration of so many rare skills on the same location, along with the presence of the best suppliers and the exchange of information allow brands such as Frederique Constant to remain at the forefront of precision watchmaking.

## LET MORE PEOPLE ENJOY LUXURY

Our aim is not to restrict the interest in Frederique Constant watches to a limited and elitist circle of connoisseurs, but rather to a broader selection of appreciative enthusiasts who want to enjoy Swiss high-quality classical watches at sensible prices.

Frederique Constant's mission is therefore to apply the following three values to the development process of each model: design, quality and innovation.

Co-founders of Frederique Constant Peter and Aletta Stas (top image)  
Managing Director of Frederique Constant Niels Eggerding (bottom image).

# MANUFACTURE HISTORY

## IN 2004

Frederique Constant entered the elite circle of Swiss watchmaking brands to develop and produce their own in-house caliber. Consequently, Frederique Constant became a “Manufacture”: in-house developed, in-house produced, in-house assembled.

## IN 2006

In 2006, the Brand first felt the need to enlarge its production facilities and strategically decided to move into a 3200 m<sup>2</sup> building in Plan-les-Ouates. After eleven years, Frederique Constant ran out of space due to its rapid growth and high demand from its worldwide markets. Two years were then needed to achieve the construction of an additional 3000 m<sup>2</sup> space, bringing the Frederique Constant Group’s headquarters up to 6200 m<sup>2</sup>, thus enabling to completely re-organise the implementation of the different working areas.

On the ground floor, the visitors will find an exclusive dedicated space where they will have the chance to take on a Manufacture Experience tour, allowing them to discover each Brand’s universe and history (Frederique Constant, Alpina Watches, Ateliers deMonaco). On the first floor, all production workshops from T1 to T4 have been regrouped, thus optimizing watchmaking workflow and logistics. Offices including Top Management, Finance, Human Resources, Marketing, Sales and Administration departments have been spread on the second floor.

## TODAY

Frederique Constant has gradually become an important player within the watchmaking industry. With the ambition to offer the best quality at the most appropriate prices, the Maison hasn’t stopped investing in production equipment. Besides surrounding ourselves with highly qualified watchmakers, we have developed all our departments to be able to control the various stages of the production of our watches, from initial conception to the final quality control, including assembly.

and the extension building inaugurated in 2019 (previous page).

# MANUFACTURE FROM SKETCHES TO PRODUCTION

## DESIGN AND CONCEPTION

When creating a new Manufacture timepiece, designer and engineer work hand in hand to start a meticulous building process. While the designer is in charge of shaping the exterior of the watch, the engineer gives birth to the movement, which will bring this silhouette alive.

Component by component, layer by layer, each piece of the watch is carefully studied. Once the concept is validated thanks to 3D design modelling tools, the prototyping phase starts. A watch prototype allows our teams to evaluate its relevance in terms of function, technicity and design, once it is worn.

## TO WORKSHOP – MACHINING

The manufacturing process of a watch starts in the so-called T0 workshop. It is where our engineers produce the brass plates for the Manufacture collection, constituting the first element of the Movement. Using CNC machines, the latter are programmed to shape the plates – and also the bridges – according to the designs of the R&D team. After milling, the plates are cleaned up and the rough edges removed, using polishing tools. A meticulous work, it reflects Frederique Constant's luxury standards.

The plates are then sent to a finishing unit which applies rhodium plating, before ending up in the T1 workshop for assembly.

## DECORATION

It is not to mention that each visible component of our manufactured timepieces is beautifully decorated. The aim being that every time one gazes at a Frederique Constant Manufacture watch, one is bound to feel joy. Detailed engravings, circular *Côtes de Genève* pattern and *perlage* enhance the movement's part.

Design and conception (top image)  
Prototyping workshop (bottom image)

# MANUFACTURE THE MANUFACTURING PROCESS

## T1 WORKSHOP - MOVEMENTS

Commonly called T1 internally at Frederique Constant, this Manufacture's workshop is highly technical, as it is dedicated to the production of our in-house movements. Our watchmakers and master watchmakers undertake long and fastidious work, for which patience, experience and know-how is required.

They handle delicate and fragile components and have to be very precise with every gesture. Some Frederique Constant movements are made up from more than a hundred components. They assemble, adjust and control all our mechanical movements to make sure everything functions properly. Mainly all assembly operations and settings are made by hand, to ensure our watches are provided with the highest quality: jewelling, oiling, balancing the pendulum, just to name a few.

# MANUFACTURE

## THE MANUFACTURING PROCESS

### T2 WORKSHOP - ASSEMBLY

The assembly workshop at Frederique Constant, or T2, is dedicated to all the operations necessary for the encasing of the watch. Our watchmakers carefully handle all the different parts that constitute the watch: the movement, the case, the dial and the hands. Every Frederique Constant watch is assembled by hand.

The cleanliness of this workshop is extremely important, in order to prevent any foreign matter to penetrate into the movements and constricting the smooth functioning of our watches.

# MANUFACTURE

## THE MANUFACTURING PROCESS

### T3 WORKSHOP - QUALITY CONTROL

All Frederique Constant timepieces - equipped with quartz as well as mechanical movements - are submitted to a very extensive series of tests. Each watch will be tested to ensure optimum performance, a further step in which our controllers re-test all the functions of the watch: jump the date, time settings, winding (if the watch is mechanical) and so on. Mechanical watches with automatic winding system undergo another series of tests that will differ depending on the complexity of the movement: rate and amplitude tests, and the power reserve's resistance. But if one of these tests does not meet our quality standards, the watch will return to the production cycle until it reaches a perfect accuracy.

T3 - Quality control (top image)  
T0 - Machining workshop (bottom left)  
T1 - Movements workshop (bottom right)

T2 - Assembly workshop (top image)  
T3 - Quality control workshop (bottom image)

# MANUFACTURE A CAREFUL ATTENTION

## AFTER-SALES SERVICES

All Frederique Constant timepieces are guaranteed for two years, parts and labor, for a normal use of the watch. The Frederique Constant movements, either quartz or mechanical, need to be revised more or less regularly, according to their complexity. Therefore, they return to our After-Sales Service workshop and pass through the hands of our highly skilled watchmakers, who will verify that they operate correctly, and will also check the mechanics of the movement.

Only the Tourbillon Manufacture Silicium does not go through this department. In fact, it comes back to the hands of the watchmaker who assembled, adjusted and encased it, within the Manufacture's dedicated workshop. At Frederique Constant, it is essential that our watchmakers take care of an exceptional timepiece throughout its life. Once again, the watch will undergo all the quality control tests before being returned to its owner.

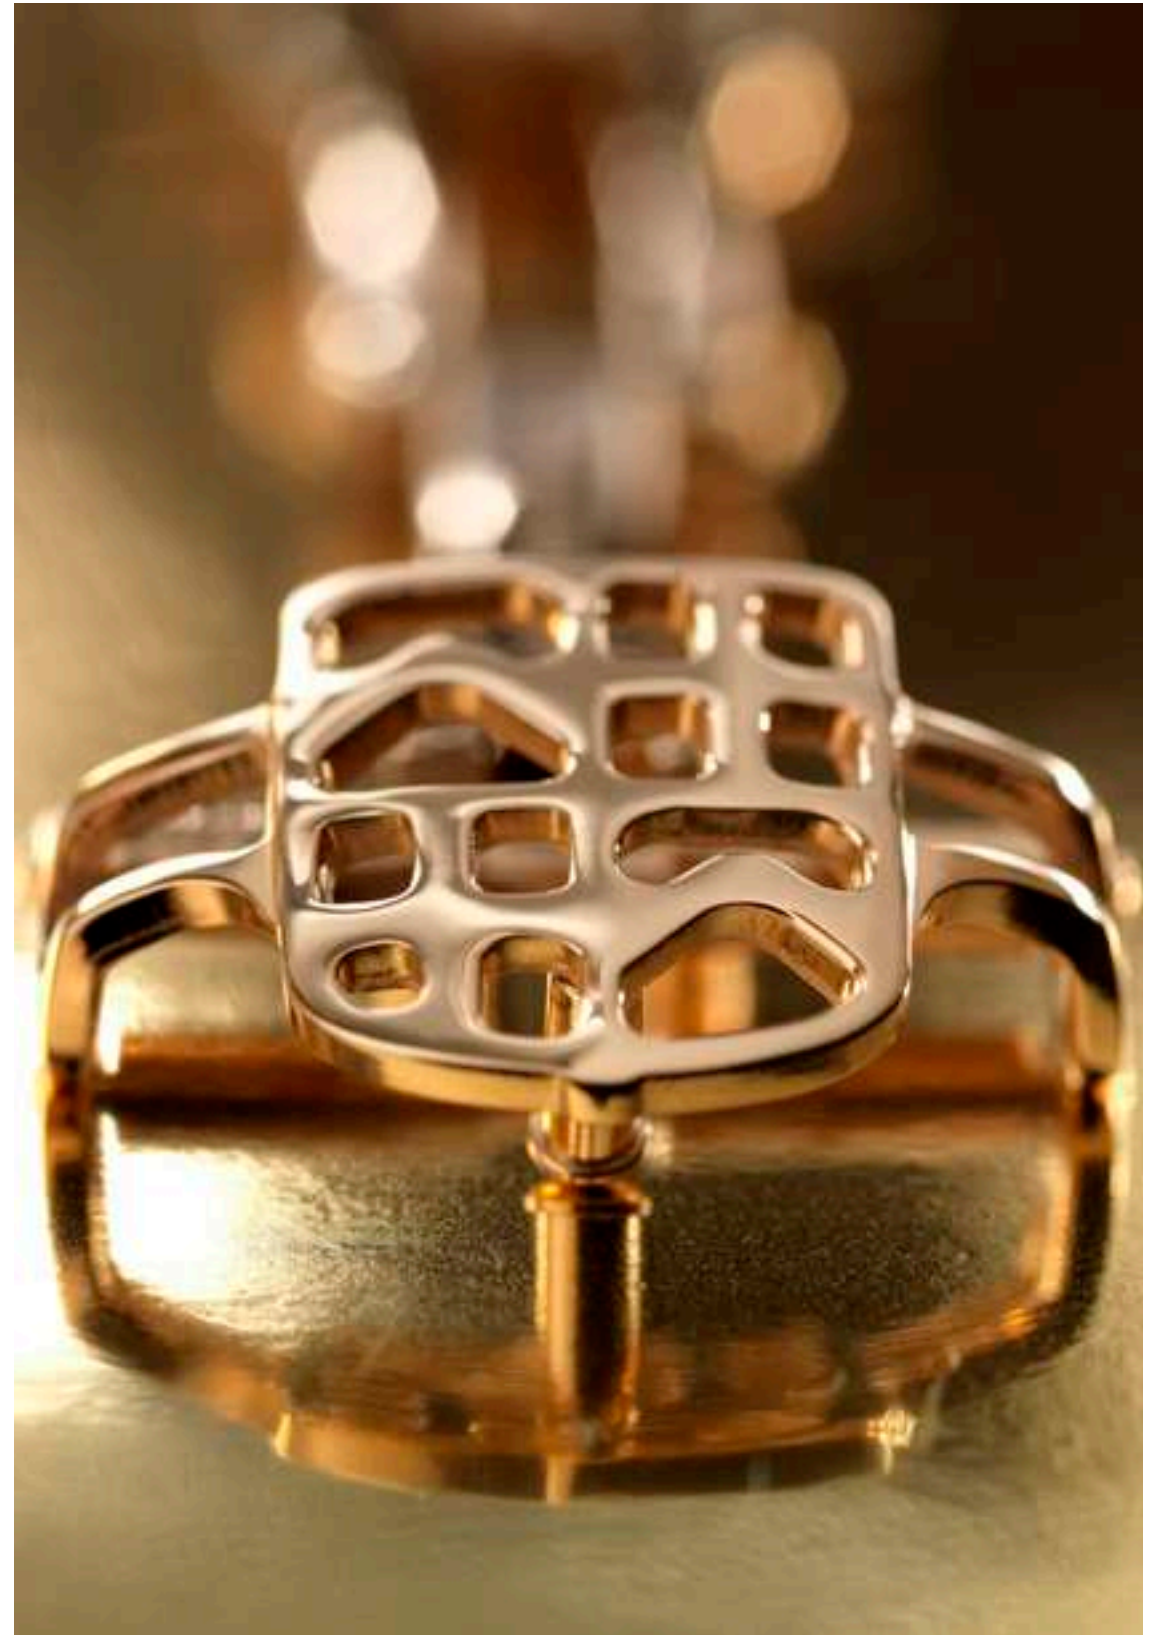

## A PASSION FOR DETAILS

Right from the conception of a new model, we take the utmost care in the smallest details and parts which constitute a watch, to guarantee a complete satisfaction, in regards to both the design as well as the comfort on the wrist.

Hand-polished cases, refined and decorated dials featuring various *guilloché* patterns in the centre and hand-applied indexes are some of the details we pay attention to for our clients' pleasure.

We, at Frederique Constant, have a passion for creating beautiful, high-quality watches with impeccable finish. Every detail of each timepiece, whether technical or aesthetic, is equally important. Our movements are also treated with just as much care and attention. Decorations such as *Côtes de Genève* or *perlage* - which are executed in the most meticulous way - can be admired through the sapphire case back, thus adorning the main plate, the bridges or the oscillating weight. Most of the movement's components are carefully angled in order to break and polish their bevelled edges, for an even more refined aesthetic.

The watch straps, whether in leather or in metal, are systematically designed for comfort while being worn. Finally, our buckles are elegantly decorated with the Frederique Constant crest.

# FC-900 CALIBERS SERIES

## HEART BEAT

The first Heart Beat timepiece was launched in 1994. The purpose of the Heart Beat development was to show that these models were equipped with a mechanical movement. With this in mind, Frederique Constant added an aperture at the position of the balance wheel to show the beauty of the movement, of its "heartbeat".

At the time, this very innovative creation allowed the Maison to demonstrate its watchmaking skills with ingenuity. However, a forgetful incident with the patent for this particular invention allowed other brands to find inspiration and duplicate what Frederique Constant tried so hard to present as its own. Following this unfortunate event, the Brand found resourceful ways to claim its inventive spirit.

In 2004, Frederique Constant presented its first ever in-house movement, which happened to be a manual winding version of the Heart Beat movement. Major changes were applied to this new watch, such as shifting the "heartbeat" to 6 o'clock, which required ultimate craftsmanship and propelled the collection to a higher degree of technique and elegance. In the following years, several modifications were made to the original design, thus awarding the Brand with many new models.

# FC-700 CALIBERS SERIES

## ALL FUNCTIONS ADJUSTABLE BY THE CROWN ONLY

The Frederique Constant FC-700 caliber series, originally developed and launched in the 2009 Maxime Manufacture collection, is proof that wonderful technological advances can be made and are still incredibly easy to use.

Since then, our designers, engineers, technical team and dedicated watchmakers have all worked together to develop the FC-700 caliber series. What started as a relatively basic caliber, has evolved. Today, the full range of features and complications of any timepiece using an FC-700-series caliber can be quite simply adjusted via the watch's single crown.

This development represented a major breakthrough in the Maison's manufacture of luxury Swiss timepieces. The FC-700 caliber, which took years to design and develop, acted as the springboard for future advances in Frederique Constant timepieces.

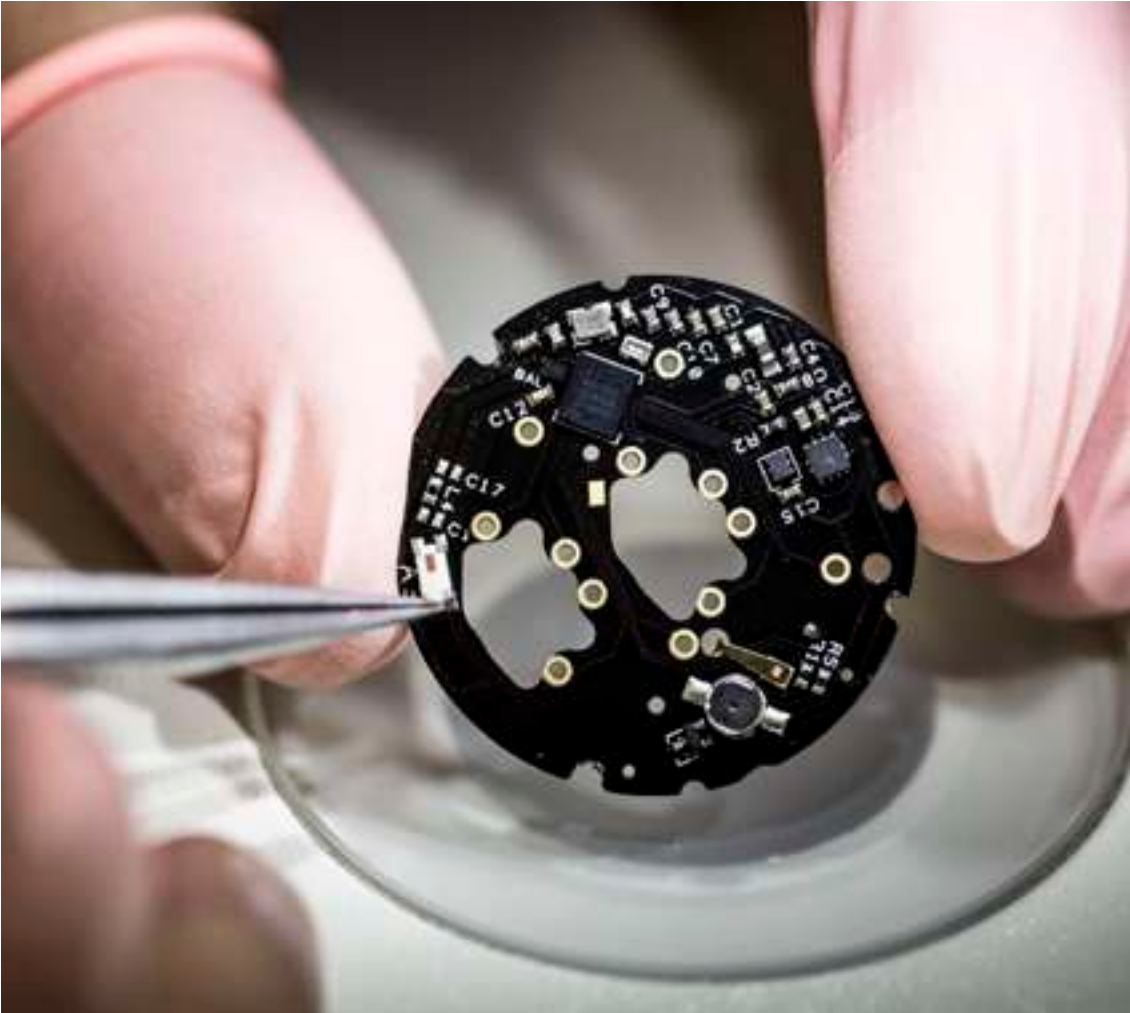

# SMARTWATCH SERIES

## CONNECTED

Nowadays, keeping an eye on one's well-being has become a key element to help improving work life and health concerns. The health benefits of being more active and getting better sleep are well understood: monitoring and sleep tracking are the most successful wearable applications used by over 20 million people.

Back in 2015, Frederique Constant unveiled the first Swiss Made Horological Smartwatch. For the very first time, a Swiss manufacture had designed, developed and assembled a watch embodied in a classical design – featuring an analog dial – endowed with onboard intelligence. Followed by several developments and technological improvements since then, Frederique Constant now offers a wide range of connected watches aimed to monitor one's health and improve their well-being.

Thanks to the Frederique Smartwatch companion App, available for iOS and Android, data is recorded in real time and reported in the form of graphs, to ensure optimum analysis.

# HIGHLIFE COLLECTION

## HONORING THE PAST WHILE SHAPING THE FUTURE

In 1999, Frederique Constant launched the first models of its Highlife collection. Embodied in a unique design, they were characterized by their integrated strap. In 2020, the Maison perpetuated this ingenious concept, and brought this collection back in the spotlights with three models fitted with this intelligent feature.

Leather, rubber, or steel then embellish the watch as desired, allowing it to display a classic or rather sporty look. Changing the bracelet has become as simple as a child's play. Thanks to the integration of two push-pins at the end of the bracelet, the transition from one to the other is very easy. A simple pressure on these pushers releases the bracelet from the case, and vice versa when integrating the new one.

A fastidious work, this quick release system was designed to go unnoticed. Discreet and delicately articulated, it fits perfectly into the curves of the watch, whose proportions have been carefully thought out to ensure optimum comfort.

# SLIMLINE MONOLITHIC MANUFACTURE

## A WORLD PREMIÈRE

Frederique Constant unveils a technological breakthrough in the field of precision timekeeping. Redefining the principles of mechanical watch regulation, the Slimline Monolithic Manufacture delivers industry-leading precision by ticking ten times faster than most mechanical movements. Etched from silicon, its oscillator replaces an assembly of several parts and eliminates many of the major weaknesses of mechanical watches. With the Slimline Monolithic Manufacture, Frederique Constant replaces the 26 components of a standard assortment with a single component fitted with two regulation weights. Thanks to its specific design and reduced size, the revolutionary high-frequency oscillator has been designed to fit inside a traditional movement configuration. Housed inside a 40mm case with an aperture on the dial to view the oscillator, this cutting-edge technology is available at a price that respects the brand's commitment to accessible luxury.

# MANUFACTURE

## COLLECTION

With most models produced in limited editions, the Frederique Constant's Manufacture collection is the most prestigious and technologically advanced range presented by the Brand. Featuring beautiful dials engraved with delicate *guilloché* decorations, along with sleek and elegant cases, these timepieces are certain to attract admiring glances.

The Brand started this development back in 2001, thanks to its team of highly skilled watchmaking specialists. Today, more than twenty years later, Frederique Constant is able to manufacture thirty different in-house calibers within its Manufacture.

Fully developed, produced, assembled, adjusted and encased in our workshops, the Manufacture collection is a beacon for Frederique Constant's technical know-how and mechanical expertise. It's manufacturing process requires extensive work, and is done mostly by hand, for the pure pleasure of the connoisseurs of high-quality watchmaking.

Alligator or crococalf leather straps, crystal see-through case backs, intricate engravings and carefully selected raw materials, from gleaming stainless steel to lustrous rose gold, everything contributes to the "wow factor" this range has in abundance.

# HIGHLIFE

## COLLECTION

Over 20 years ago now, back in 1999, Frederique Constant introduced the very first Highlife watches. In 2020, the Maison revived the iconic design, reintroducing the masculine collection with resolutely modern curves rooted in the 21st century. Like the original inspiration, the Highlife collection has an integrated bracelet.

Not only has Frederique Constant managed to achieve this natural continuity, but the integrated system also allows the wearer to change the bracelet with ease, as often as an outfit, occasion or mood dictates, helping them overcome the challenges of daily life and be fulfilled. Thanks to the integration of two push-pins at the end of the bracelet, the transition from one to the other is very easy. A simple pressure on these pushers releases the bracelet from the case, and vice versa when integrating the new one.

In 2021, owing to its popularity, the latter inspired the eponymous collection for women, unveiled for watchmaking enthusiasts, the sophisticated and fashion-forward modern women of today and tomorrow. Graceful yet assertive, its creations combine the subtlety of exquisitely feminine timepieces with the presence of one that asserts its identity and unique character.

# LADIES AUTOMATIC

## COLLECTION

The most intense moments and most vivid memories can be counted in seconds. Oftentimes, a look, a gesture, or a few words are enough to etch a precious moment on one's memory. The Frederique Constant Ladies Automatic collection has been designed by women, for women. Classic and elegant, feminine and sophisticated, these fine mechanical timepieces, which designs hug the curves of a sophisticated 36 mm case, have been developed with passion to reflect the values and aspirations of the modern women looking for a classic timepiece for an everyday wear.

Combining elegance and grace with a floral pattern or a mother-of-pearl dial surrounded by hour markers set with diamonds, these timepieces revive Swiss Made fine watchmaking for women with creativity and distinction by featuring an off-centered small seconds, or even the Brand's iconic Double Heart Beat aperture.

# SMARTWATCH

## COLLECTION

For over five years, Frederique Constant continued to move forward with its connected watches – a development that the watchmaker began back in 2015, by becoming the first Geneva-based manufacturer of mechanical watches to embrace Swiss Made smartwatches. This sustained commitment has seen the number of offerings multiply (Horological Smartwatch «Classics», «Notify», Classic Hybrid Manufacture), still based on connected modules designed and assembled in Switzerland.

The fourth generation Smartwatch Vitality builds on these developments. In addition to the features that were key to the success of its predecessors, it embraces a major innovation with the integration of a heart rate monitoring sensor powered by Philips Wearable Sensing. Presenting a traditional appearance, its dial also reveals a digital display on demand, allowing its user to consult each functionality's related data such as the heart rate, activity tracker, messages and notifications, weather, alarm, chronograph and plenty more besides.

Since the Smartwatch Vitality model is connected to the Frederique Constant Smartwatch App, all the functionalities of the watch and the user's objectives may be configured directly via the application. Last but not least, the battery of the Smartwatch Vitality is now rechargeable.

# SMARTWATCH VITALITY

The latest additions to the Smartwatch collection stay true to the Brand's elegant tone and style while integrating a cleverly hidden digital screen. Behind the watches' chic yet apparently classic dial, lies a new digital screen, bringing its user an interactive and user-friendly solution to read information. The user is able to navigate easily through the various functions by pressing the watch's crown.

Its functions include Frederique Constant's signature selection, fit to serve any busy gentleman or lady daily. On top of the latter essentials, the newcomer and focus; an integrated optical heart rate measuring system provided by electronics expert Philips Wearable Sensing.

Philips Wearable Sensing being the leading provider of optical heart rate solutions, the sensor provides accurate monitoring for cardiac, activity, health and fitness metrics. It offers an algorithm that extracts and processes the sensor's data, factoring out body motion, pigmentation and ambient light to produce highly accurate results.

## FUNCTIONS

# YACHT TIMER

## COLLECTION

Yachting watches have always been enjoyed by all types of wearers, from avid sailors to beach dwellers, or even those who simply appreciate nautical aesthetics. However, these timepieces are highly precise and have been designed to specifically meet sailing needs, which require extremely accurate timekeeping.

The moments leading up to the start of a regatta are crucial: each yacht must attempt to hold its position at an imaginary starting line while enduring the elements, from the current of the water to the force of the wind. Skippers must be able to maintain control of their sailboats, as well as anticipate the time leading up to the moment the official starting gun fires. Yachting watches have been carefully and thoughtfully developed to measure this interval.

Frederique Constant is proud to present its Yacht Timer collection. Embracing the Yacht Timer GMT and the Yacht Timer Regatta Countdown models, it pays tribute to the universe of sailing, which is also part of the Dutch history and roots.

# RUNABOUT

## COLLECTION

Since 2009, Frederique Constant has been celebrating the legendary Runabout yachts of the roaring 20's, by offering an attractive series of limited edition timepieces named "Runabout". Runabout boats were designed by skilled engineers who endeavoured to create a timeless design – highly polished wood, gleaming chrome and glistening glass – that would never go out of fashion. They succeeded. Today, these stunningly elegant crafts still grace the world's finest waterways, and many of them have been seen at events hosted by Frederique Constant.

### THE RHS (RIVA HISTORICAL SOCIETY)

Guardians of a wonderful legacy, the Riva Historical Society was founded in Milan, Italy, in 1998. The RHS's primary objective is to locate and aid in the conservation of classic runabout boats designed by eponymous boating passionate, Mr Carlo Riva. Frederique Constant has joined forces with the RHS in order to salute the crafts that epitomize the sophistication and easy elegance of that wondrous time, when the world seemed happy and relaxed.

# VINTAGE RALLY

## COLLECTION

Frederique Constant has a long-standing commitment in supporting vintage car rallies. Over the past seventeen years, the Maison has been closely associated, often as the Official Timekeeper, with international events such as the Peking to Paris Motor Challenge, the Carrera Panamericana, taking place in America, Canada and Mexico.

Since 2004, the Brand has been collaborating with the Austin-Healey car brand. A partnership based on allegiance and fellowship between watchmaking and mechanics, punctuated by meetings, races and a shared passion for retro design.

Honouring the universe of racing, the Vintage Rally collection shares a number of features with the cars they pay homage to. Each model being presented in a strictly limited edition, these watches are undoubtedly going to go as fast as the sleek and elegant cars which inspired their sophisticated, timeless designs. Pure style for pure passion!

# SLIMLINE

## COLLECTION

The Slimline collection is a series of ultra-thin models, comprising quartz as well as automatic movement. The fine quartz movements upon which these elegant watches are based present a thickness of 1.90 mm, while the FC-312 automatic caliber measures 3.6 mm only.

Displaying the Brand's famous Heart Beat aperture at 12 o'clock, a moonphase indication at 6 o'clock or even enhanced with a central guilloché decoration, the light-coloured and mother-of-pearl dials of this collection reflect absolute refinement due to their pure lines and the quality of their design.

Elegance of the shape, timelessness of the style, harmony of the curves, everything contributes to make each of these timepieces a classic in a modern interpretation. Thin and chic at each and every level.

# CLASSICS

## COLLECTION

Frederique Constant is known for its classical and refined timepieces of exceptional value. Pure lines and a timeless design are the hallmarks of every watch within the Classics collection. Other attributes that never go out of fashion include reliability and durability. Every timepiece within the Classics collection has been engineered to the most exacting standards.

Producing precision timepieces like those made at Frederique Constant requires exceptional skill and, of course, the finest materials and most advanced techniques. Our Maison is determined to maintain the highest possible production standards in every watch that bears the name of Frederique Constant.

The Brand's philosophy of providing luxury watches at affordable prices holds true across the range.
